

1. Client Clarification Questions (Priority Based)

❖ High Priority Questions

- I. What types of data will the search be able to find? (Such as Product name, category, brand)
- II. Should the search functionality support partial keyword matching? (Like typing “dre” should return results like “dress”)
- III. Is the search functionality case-sensitive or case-insensitive? (Like “DRESS” vs “dress”)
- IV. Can users apply multiple filters at the same time? (Like price + category together)
- V. Should filters be applied instantly or only after clicking an “APPLY” button?
- VI. What should be displayed when no products match the search or filter criteria? (Like show any message)
- VII. What sorting options should be available to users? (Like Price Low to High, High to Low, Product Name, Relevance)

❖ Medium Priority Questions (Behavior & UX)

- VIII. What is the default sorting applied when the user lands on the product listing page?
- IX. Can users reset or “Clear All” filters with one click?
- X. Will search results be paginated or use infinite scrolling?
- XI. Should out-of-stock products appear in search and filter results?

❖ Low Priority Questions (Edge Cases & Enhancements)

- XII. How should the system handle special characters in search input? (Like @, #, % etc.)
- XIII. Should the system cache frequently used filter results to improve response time and overall performance?
